

6-Month Cybersecurity Roadmap (Week-by-Week Guide)

Introduction to CyberXplainer

Welcome to **CyberXplainer**, the YouTube channel dedicated to breaking down complex cybersecurity concepts into simple, engaging, and practical lessons. Our mission is to **empower aspiring cybersecurity professionals** by providing them with the knowledge and tools needed to excel in this exciting field. This roadmap is part of our ongoing commitment to helping the cybersecurity community grow stronger and more inclusive.

Overview:

This roadmap is designed to guide absolute beginners to become job-ready in cybersecurity within 6 months. The roadmap is divided into weeks, with each section building upon the previous one. The focus is on mastering foundational knowledge, earning relevant certifications, gaining practical experience, and landing your first cybersecurity job.

Motivation Booster:

Every time you complete a major milestone (like a month's worth of learning), reward yourself! Whether it's a nice dinner, a new book, or a day off to recharge, celebrate your progress. You've earned it!

Month 1: Building Core Knowledge (Foundations)

Week 1-2: Networking Fundamentals

- Learn the basics of how networks work.
- Understand TCP/IP, OSI Model, IP Addresses, Subnetting, and DNS.
- Study common protocols like HTTP, HTTPS, FTP, SSH, etc.
- Learn about Firewalls, VPNs, and Proxies.
- **Resources:** Cisco Networking Basics (NetAcad), Wireshark (Network Traffic Analysis).
- 🎁 **Reward:** Treat yourself to your favorite snack or a relaxing activity once you complete this section.

Week 3-4: Operating Systems Basics

- Get familiar with Windows & Linux operating systems.

- Learn basic Windows & Linux commands, file permissions, and access controls.
 - Practice log analysis to identify security threats.
 - Set up a home lab using VirtualBox or VMware with Kali Linux & Windows VM.
 - **Resources:** TryHackMe's "Windows Fundamentals" & "Linux Fundamentals".
 - 🎁 **Reward:** Take a break, watch your favorite movie, or buy a small gadget to keep yourself motivated.
-

Month 2: Introduction to Cybersecurity Fundamentals

Week 5-6: Understanding Cyber Attacks & Defenses

- Learn about different types of attacks (Phishing, Malware, Ransomware, DDoS, etc.).
- Understand Encryption basics (AES, SHA-256, TLS).
- Explore the concept of SIEM tools (Splunk, Security Onion).
- Start with Cybrary's "Introduction to Cybersecurity".
- 🎁 **Reward:** Buy yourself a cool cybersecurity-related t-shirt or notebook.

Week 7-8: Hands-On Practice & Tools

- Practice network traffic analysis using Wireshark.
 - Practice Linux command-line operations.
 - Perform vulnerability scans using tools like Nessus or OpenVAS.
 - Work with Security Onion to practice threat detection and analysis.
 - **Resources:** TryHackMe, Hack The Box (Beginner Labs).
 - 🎁 **Reward:** Reward yourself with something you enjoy like a day trip or a special meal.
-

Month 3: Certifications & Skill Specialization

Week 9-10: Preparing for Entry-Level Certifications

- Focus on ISC2 Certified in Cybersecurity (CC) or CompTIA Security+.
- Study networking, security fundamentals, and incident response.
- Use practice exams and simulated environments to boost preparation.
- 🎁 **Reward:** Treat yourself to a break day or a new book on cybersecurity.

Week 11-12: Certification Exams & Specialization

- Attempt entry-level certification exam (CC or Security+).
- Explore specializations based on interest:
 - Penetration Testing (CEH, eJPT)
 - SOC Analysis (CCOA)
 - Cloud Security (AWS Certified Security Specialty)
- 🎁 **Reward:** Celebrate by buying something you've been wanting or taking a relaxing day off.

Month 4: Hands-On Experience & Labs

Week 13-16: Building Practical Skills

- Set up a home lab (if not done already).
 - Practice ethical hacking techniques (if interested in Penetration Testing).
 - Perform SOC Analyst tasks (log analysis, incident detection) if focusing on SOC roles.
 - Work on cloud security configurations (AWS, Azure).
 - Participate in Capture The Flag (CTF) challenges on platforms like TryHackMe or Hack The Box.
 - **Resources:** VirtualBox/VMware, Kali Linux, Windows VM, Cloud accounts (AWS, Azure).
 - 🎁 **Reward:** Reward yourself with something cool—a piece of tech, a course subscription, or a game.
-

Month 5: Real-World Experience & Personal Branding

Week 17-20: Creating Your Portfolio

- Start a GitHub profile and contribute to open-source security projects.
 - Participate in bug bounty programs (HackerOne, Bugcrowd).
 - Document your learning journey and share on LinkedIn or a personal blog.
 - Continue practicing on CTFs and real-world scenarios.
 - **Resources:** GitHub, Personal Blog, Bug Bounty Platforms.
 - 🎁 **Reward:** Treat yourself to a fancy meal or new gear to keep you motivated!
-

Month 6: Job Preparation & Applications

Week 21-24: Applying for Jobs & Interviews

- Prepare your resume showcasing practical skills and certifications.
- Practice mock interviews with a focus on practical scenarios.
- Apply to entry-level roles such as SOC Analyst, Cloud Security Engineer, or Junior Penetration Tester.
- Continue enhancing your skills through CTFs and real-world projects.
- 🎁 **Reward:** Celebrate your efforts with a day off or something you've been wanting to buy.

Week 25-26: Job Hunting & Final Preparations

- Apply aggressively to job listings.
- Customize your resume for each application.
- Use LinkedIn for networking and approaching recruiters.

- 🎁 **Reward:** You've made it! Reward yourself big—plan a mini-vacation or buy that special item you've been saving for.

🚀 What's Next?

Once you land your first job, continue expanding your skills and working towards advanced certifications (CISSP, OSCP, AWS Security Specialty) to increase your earning potential.

Your 6-month journey doesn't end here; it's only the beginning of your cybersecurity career!

Good luck, and get ready to crush your goals! 💪🔥

📅 Printable Roadmap Calendar (For Progress Tracking)

Week	Task Summary	Status (✓/✗)
1-2	Networking Fundamentals	
3-4	Operating Systems Basic	
5-6	Understanding Cyber Attacks	
7-8	Hands-On Practice & Tools	
9-10	Preparing for Certifications	
11-12	Certification Exams & Specialization	
13-16	Building Practical Skills	
17-20	Creating Your Portfolio & LinkedIn Profile	
21-24	Job Applications & Interviews	
25-26	Job Hunting & Preparations	

Now you can print this table and tick off your progress as you complete each section of the roadmap! ✅
