3/7

WHAT IT SAYS

Must have experience with SIEM tools (Splunk, ELK, QRadar)

WHAT IT MEANS

You should understand what logs are, how alerts work, and basic searches in any one tool (even if it's just TryHackMe or a home lab).

4/7

WHAT IT SAYS

Familiarity with threat intelligence platforms.

WHAT IT MEANS

You should know how to look up IOCs, check for suspicious IPs/domains, and understand basic terms like “indicators” and “TTPs.”

5/7

WHAT IT SAYS

Experience with scripting or automation (Python, Bash, PowerShell)

WHAT IT MEANS

You don't need to be a developer. If you've written a few small scripts — like log parsing, renaming files, or basic automation — you're already on the right track.

6/7

WHAT IT SAYS

Must understand NIST, ISO 27001, or other frameworks

WHAT IT MEANS

You don't need to memorize regulations. Just know what these frameworks are for — e.g., managing risk, creating policies, securing data.
