35+ Vital Linux Networking Commands

in/harunseker/

It's a good practice to update your package lists before installing new software or running commands that rely on package availability. Please use `sudo apt update` before executing the following commands.

No	Command	Description	Example
1	<code>ifconfig</code>	Display network interface information	<code>ifconfig</code> <code>ifconfig -a</code>
2	<code>ip</code>	Show and manipulate routing, network devices, interfaces, and tunnels.	<code>ip address</code> <code>ip address show</code> <code>ip a</code>
3	<code>route</code>	Display or manipulate the IP routing table	<code>route</code> <code>route -n</code> Manipulate routing tables: <code>route add default gw 192.168.1.1</code> Add a new route: <code>route add -net 192.168.2.0 netmask 255.255.255.0 gw 192.168.1.1</code> Delete a route: <code>route del -net 192.168.2.0 netmask 255.255.255.0</code>
4	<code>ping</code>	Send ICMP ECHO_REQUEST to network hosts	<code>ping google.com</code> <code>ping -c 4 google.com</code>
5	<code>traceroute</code>	Print the route packets trace to network host	<code>traceroute google.com</code>
6	<code>netstat</code>	Print network connections, routing tables, interface statistics	<code>netstat -an</code>

in/harunseker/

7	<code>ss</code>	Display socket statistics	This command provides a summary of socket statistics: <pre>ss -s</pre> This command displays TCP, UDP, listening, and process information: <pre>ss -tulpn</pre> This command shows all TCP sockets, including both listening and non-listening sockets: <pre>ss -t -a</pre> Show listening sockets: <pre>ss -l</pre>
8	<code>hostname</code>	Show or set the system's host name	<code>hostname</code>
9	<code>dig</code>	DNS lookup utility	<pre>dig google.com</pre> <pre>dig google.com +short</pre> <pre>dig +short A google.com</pre> <pre>dig +short MX google.com</pre>
10	<code>nslookup</code>	Query Internet name servers interactively	<code>nslookup google.com</code>
11	<code>host</code>	DNS lookup utility.	<code>host google.com</code>
12	<code>iptables</code>	Administration tool for IPv4 packet filtering and NAT	<code>sudo iptables -L</code>
13	<code>tcpdump</code>	Capture and display packets on a network. Dump traffic on a network	<pre>tcpdump -i eth0</pre> <pre>tcpdump -i eth0 tcp port 80</pre> Capture and display packets in ASCII: <pre>tcpdump -A -i eth0</pre>
14	<code>sshd</code>	OpenSSH daemon	<code>service sshd restart</code>
15	<code>telnet</code>	User interface to the TELNET protocol	<code>telnet google.com 80</code>

16	<code>scp</code>	Secure copy (remote file copy program) Copy files between hosts on a network	<code>scp file.txt user@remote:/path/to/destination</code>
17	<code>wget</code>	Non-interactive network downloader	<code>wget http://example.com/file.zip</code>
18	<code>curl</code>	Command line tool for transferring data with URL syntax	<code>curl http://example.com/api</code>
19	<code>iptraf</code>	Interactive color IP LAN monitor	<code>iptraf</code>
20	<code>iftop</code>	Display bandwidth usage on an interface	<code>iftop</code> Real-time console-based network bandwidth monitoring tool: <code>sudo iftop -n</code>
21	<code>nmap</code>	Network exploration tool and security scanner	<code>nmap -sP 192.168.1.0/24</code>
22	<code>lsof</code>	List open files	<code>lsof -i :80</code>
23	<code>ethtool</code>	Display or change ethernet card settings	<code>ethtool eth0</code>
24	<code>arp</code>	Display or modify the ARP cache	<code>arp -a</code>
25	<code>hostnamectl</code>	Control the system hostname and related settings	<code>hostnamectl status</code>
26	<code>resolvconf</code>	Manage DNS information	<code>resolvconf -u</code>
27	<code>mtr</code>	Network diagnostic tool	<code>mtr google.com</code>
28	<code>iwconfig</code>	Configure a wireless network interface	<code>iwconfig</code>
29	<code>nc</code>	Arbitrary TCP and UDP connections and listens	<code>nc -l 8080</code> Utility for reading from and writing to network connections: <code>nc -zv 192.168.1.1 22</code>
30	<code>ssh-keygen</code>	Generate, manage, and convert authentication keys for ssh	<code>ssh-keygen -t rsa</code>
31	<code>nmcli</code>	Command-line client for NetworkManager	<code>nmcli connection show</code> List available Wi-Fi networks: <code>nmcli device wifi list</code>

32	<code>nload</code>	Visual representation of incoming and outgoing traffic	<code>nload</code>
33	<code>iperf</code>	Tool for measuring TCP and UDP bandwidth performance	<code>iperf -c server_ip</code>
34	<code>fping</code>	Quickly ping multiple hosts	<code>fping -a -g 192.168.1.1 192.168.1.254</code>
35	<code>nmtui</code>	Text User Interface for controlling NetworkManager	<code>nmtui</code>
