

BLUE TEAM PROJECTS FOR YOUR RESUME

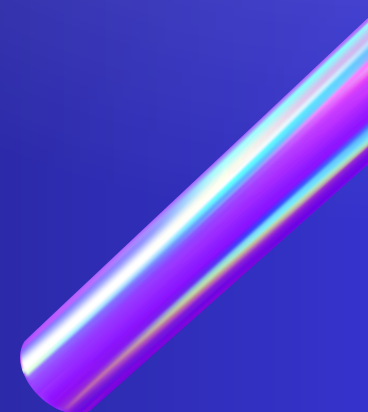

We heard you!
Here are a few
projects to boost
your Blue Team
skillset 💪

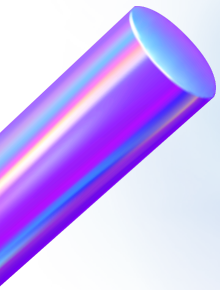

Get Familiar with Open Source Tools.

SIEM, the Elastic stack, or Splunk will do. Grab a free trial version and stand it up on a virtual machine. You'll need *some* fundamentals knowledge at this stage – check out our free Practical Security Fundamentals if you're starting from zero knowledge!

Collect Logs & Simulate Attacks!

Attack simulations aren't just for Red Teamers! Run some basic operations and see what logs come back, and look at how to run queries.

Get Hands-On Experience.

Resources like **TryHackMe**, **various CTFs**, and our course **SOC 101** (and even **Practical Security Fundamentals!**) can help you get more familiar with vital Blue Teaming concepts you'll need to know to be successful.

To recap...

— Explore open source tools

— Collect logs & simulate attacks

— Get hands-on experience (CTFs, THM, SOC 101)

— BONUS: Take a TCM course, cert, or live training!
